

## AGIVA MUDSLAYER

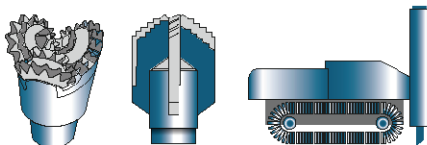

### Description

The Mudslayer is a mobile desanding unit mounted on a crawler undercarriage. It consists of a dual shaking deck, water tank and 3 desliting cones. The on-board venturi mixer provides a good mixing of drilling additives with your drill fluid. The dual shaking deck can be finetuned for specific filtration of mudparts. The V-shaped water tank has a built-in submersed oilcooler. Thanks to the remote controller, the machine can be controlled from a distance.

### Technical specifications

Pos.	Description	Price
1.	<b>Mudslayer Limited Acces M350 unit, mounted on crawler undercarriage</b>	
	Cleaning capacity: ca 56 m <sup>3</sup> /h	
	Volume tank: ca 1500 L	

Pos.	Description	Price
	Weight: ca 2000 kg	
	Hydraulic system: 2 gear pumps feed the dual screen shaker and the pumps.	
	<b>TIER 4 FINAL Kubota motor.</b>	
	Quick connections for the hydraulic submersible pump, to be placed at the borehole.	
	All hoses and pipes are easy to store on the machine.	
	3 support feet for levelling the machine.	
<b>2.</b>	<b>Dual shacking deck:</b>	
	Two shacking screens. Mesh size can be chosen:	
	Upper deck: mesh	
	Lower deck: mesh	
	Quick and easy way to stretch the screens to the desired tension due to the unique injection system	
<b>3.</b>	<b>V-shaped water tank</b>	
	V-shaped tank to transport the sand to the sand pump, equipped with a built-in oil cooler. The design of the tank is adapted to the flow and suction directions f the different in and outgoing streams	
	Tank is provided with the necessary accessories for the suction of the flushing pump.	
<b>4.</b>	<b>Desanding with 3 x 4" cones</b>	
<b>5.</b>	<b>Standard FRASTE painting</b>	
<b>6.</b>	<b>Venturi mixer system on board for making drilling fluid</b>	
	Easy addition of additives such as polymer and bentonite and good mixing of the additives.
